

sandbox 

sandbox 

I started Sandbox in 2007 with a mission statement to protect riders while keeping them looking good. Connecting with the snowboard community and product development has always been my passion and I couldn't be happier to get to do this with the brand I founded over 16 years ago.

See you on the hill.

- Kevin  
@kevinsansalone

## Style

As a uniquely rider owned company we understand the importance of creating products with industry leading protection that riders actually want to wear. From the signature brim on the Classic to the street inspired style of the Icon, we have continued to develop our collection.

## Protection

Sandbox helmets fuse protection and style that speaks to our roots in snowboarding. Our aesthetic elevates the concept of head protection from a nuisance to a must-have accessory, while never compromising our commitment to quality and safety.

### What is Mips?

The Mips® safety system is designed to provide added safety for helmets in many accidents. For certain impacts, the Mips system can reduce harmful forces that might otherwise be transferred to the user's head.

1. Traditional helmets are designed and tested for straight impacts, but most impacts are angled, which can cause rotational motion to the head.
2. The rotational motion can cause brain injuries.
3. The Low Friction Layer is intended to help reduce the rotational motion to the head in certain angled impacts.

### Straight vs angled impacts

The brain is typically more sensitive to rotational motion than linear motion because it has shear properties similar to water or gel. When different parts of the brain move relative to each other because of rotational motion, the tissues can stretch, which can cause concussions or other brain injuries.

Rotational motion is a common cause for concussions and more severe brain injury in oblique hits to the head. The Mips system consists of a low friction layer that is mounted inside the helmet. In a crash, the low friction layer is designed to move slightly inside the helmet to help redirect forces away from the head. This is intended to help reduce the risk of brain injury. Most traditional helmets are designed for straight impacts, but most impacts are angled. The low friction layer may reduce the rotational force of angled impacts.

### Safety system that mimics the brain

Unlike traditional helmets, which are mainly designed and tested for straight impacts, the Mips system's low-friction layer mimics the brain's own system for protection against rotational motion.

The cerebrospinal fluid is our natural protection system that allows the brain to move relative to the skull.

Mips® is available on our Classic 2.0 Snow and Icon Snow models.

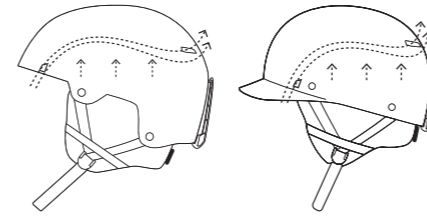

PATENTED  
SAFETY SYSTEM

LOW FRICTION  
LAYER

FOUNDED  
IN SCIENCE

**PATENTED AIRFLOW TECHNOLOGY**

Our patented Airflow system is designed to let air enter the helmet through the front slash vent and below the brim. This air flow then moves through channels in the liner that run up and over the crown, collecting excess heat and moisture rising up the chimney vents, exhausting it all out the rear vents. The end result? A cooler ride.

To help keep you cool, we added Chimney Vents that allow heat to rise passively through the eight vents in the crown. This heat then meets the helmet's Air Flow system and is pushed out the Rear Vents.

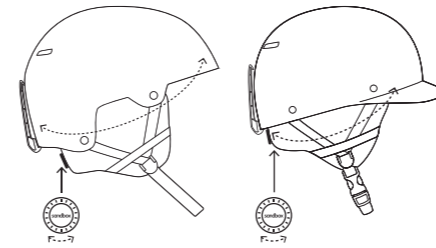

We designed the Goggle Venting system to work seamlessly with most goggles. Heat and moisture are drawn from your face and eye wear, up through channels in the EPS liner and out the Rear Vents.

**ABS OUTER + EPS FOAM INNER CONSTRUCTION**

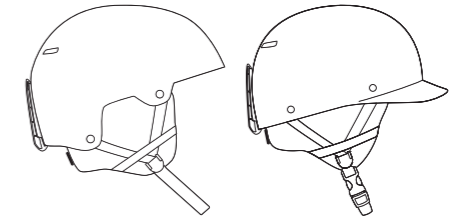

All Sandbox helmets are constructed with an injection molded ABS outer shell engineered to withstand high impacts. ABS construction is extremely durability – its tough and resilient protection where you need it most!

For the interior protection, we use a hard EPS (Expanded Polystyrene) foam designed for high impact protection. This is what really absorbs the force from impact and is the key ingredient to the helmet certifications.

**FIT SYSTEM**

The back dial fit system ensures the perfect fit with anchor points on either side of the helmet. Turning the dial tightens or loosens the helmet as required and gives you the flexibility to wear your helmet differently depending on the conditions.

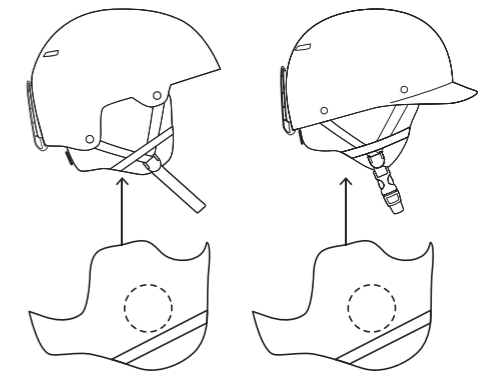

**TRIP CLIP**

The Trip Clip is a slide-on/slide-off goggle clip that offers three positions so you can work around your goggle strap adjusters.

**COMFORT LINER**

On top of the EPS foam, we have our grid fleece and breathable mesh comfort liner – it offers the best of both worlds: comfort and warmth. The grid fleece is really great at heat management – excess heat escapes through the grid lines while the little plush squares keep you warm. It's removable and washable too.

**AUDIO POCKETS**

The Icon and Classic come equipped with removable ear pads that include audio pockets.
